

3D Star

Cut out your star using a template that you can find here:
<http://www.docstoc.com/docs/4357148/large-star-template>

Using the Simply Scored score from each point to the opposite peak as shown here.

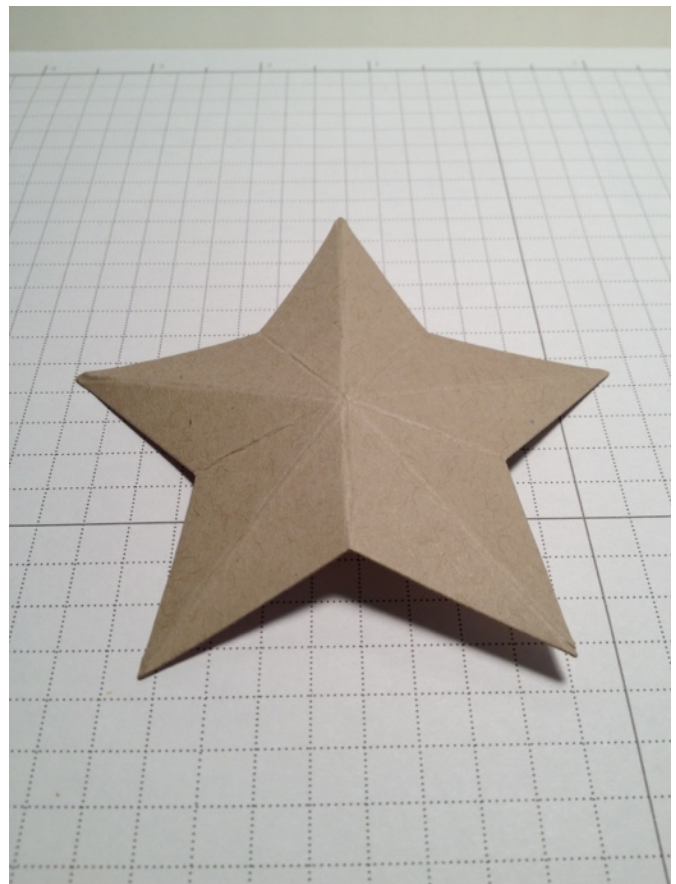

Your star should look like this when you are done.

Now, fold along each of the five score lines.

The star should look like this when you are finished folding. The long points should be folded down and the short sides should be folded up.

This is what the finished star should look like.

You can resize the template when you are printing to make any size star you want. Have fun!
